Vertis Environmental Finance invests into Steam Esco

BUDAPEST– 10th October 2015 – Vertis Environmental Finance is pleased to announce that it has made an investment into Steam Esco, an Irish technology company specialised in energy efficiency.

Steam Esco is a manufacturer of venturi-nozzle steam traps which they sell to industrial companies operating steam systems. Steam Esco's range of steam traps, the Green Saver, offer energy savings in industrial steam lines of 10-35% and a substantial reduction in maintenance requirements compared to conventional steam traps.

Vertis will also act as sales agent for Steam Esco and will offer Steam Esco's products to industrial clients across Europe and beyond.

Keith Moore, CEO of Steam Esco, said: "We are excited to team up with Vertis and work with their sales team to sell our products into new markets in Europe."

"For Vertis this is a great opportunity to diversify and get back to helping our clients reduce their fossil fuel dependency and cut greenhouse gas emissions," said James Atkins, Chairman of Vertis.
